

ABSTRACT OF THE DISCLOSURE

In an electrophotographic photosensitive member having a support, and provided thereon a photosensitive layer, a surface layer of the electrophotographic
5 photosensitive member contains an electrically insulating binder resin and a random-copolymer type high-molecular-weight charge-transporting material having two kinds of specific repeating structural units. Also disclosed are a process cartridge and an
10 electrophotographic apparatus which have such an electrophotographic photosensitive member.
